LAB OBSERVATION

EXPERIMENT-7

7) Develop a dashboard prototype in Figma displaying performance criteria for a cellular system.

Answer)

Aim:

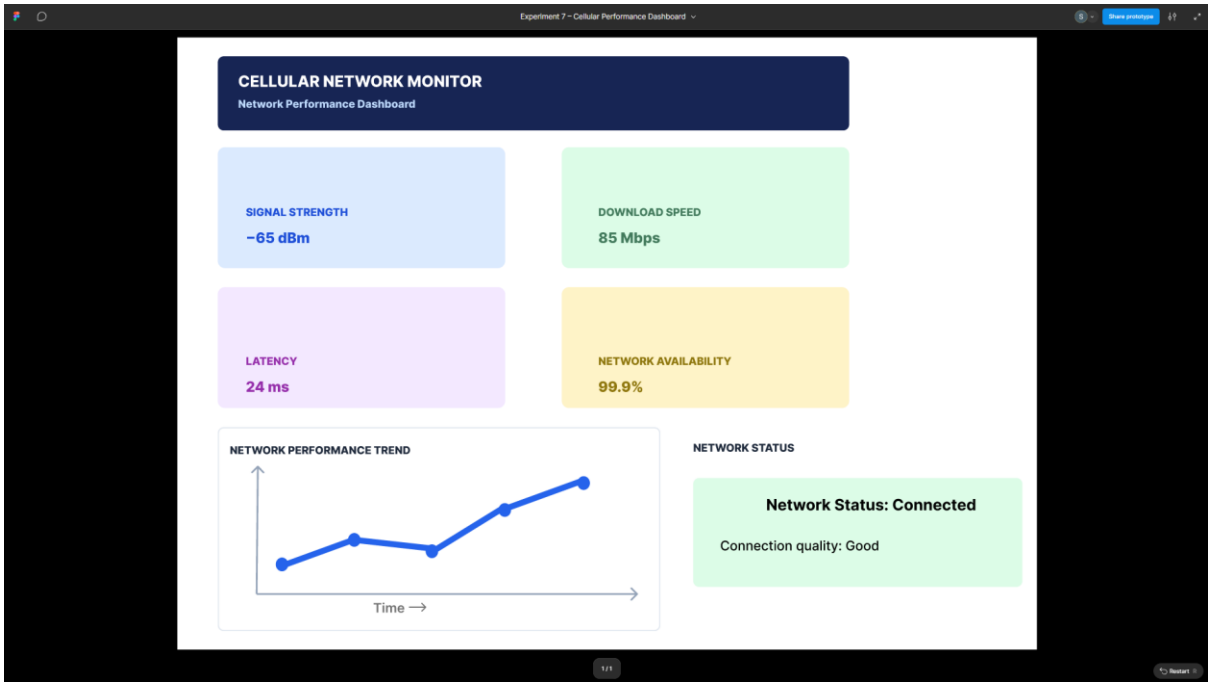

To develop a dashboard prototype using Figma to display important performance criteria of a cellular system, including signal strength, download speed, latency, network availability, and network status.

Procedure / Algorithm:

1. Open Figma and create a new design file.
2. Create a Desktop frame for the cellular performance dashboard.
3. Add a dashboard header with the title Cellular Network Monitor.
4. Create metric cards to display signal strength, download speed, latency, and network availability.
5. Use suitable colors and icons to represent each performance metric.
6. Design a network performance trend chart using axes, data points, and connecting lines.
7. Add a network status section showing connection status and connection quality.
8. Arrange all elements neatly and review the overall dashboard layout.
9. Save the completed design in Figma.

Output:

A cellular system performance dashboard prototype was created in Figma, displaying key network performance metrics, a performance trend chart, and network connection status.

Result:

The cellular system performance dashboard prototype was successfully designed using Figma to visually represent important cellular network performance criteria.
