LAB OBSERVATION

EXPERIMENT-9

9) Develop a user interface prototype for a GSM service using Figma.

Answer)

Aim:

To develop a user interface prototype for a GSM service using Figma.

Procedure:

1. Open Figma.
2. Create a new design file.
3. Select a suitable mobile phone frame.
4. Add the required content for the GSM service interface.
5. Design visual elements using appropriate shapes, colors, icons, and text.
6. Make the interface interactive where required.
7. Add annotations and explanations.
8. Incorporate multimedia elements where appropriate.
9. Create a storyboard animation if required.
10. Review and edit the prototype.
11. Save and share the completed design.

Output:

A user interface prototype for a GSM service was successfully created using Figma, displaying voice call, SMS, network, settings, SIM status, and network details.

Result:

Hence, a user interface prototype for a GSM service was successfully developed using Figma.
